

# Social interaction styles across development

## LINK TO ONLINE QUESTIONNAIRE:

<https://durham.onlinesurveys.ac.uk/social-motivation-throughout-childhood>

### Project Information

In this study we are interested in the social behaviours and interaction styles of children (aged 4-16yrs) with a broad range of developmental conditions. Therefore we would like to ask parents of children / young people in the following groups to complete our online questionnaire:

*Williams syndrome*  
*Fragile X syndrome*

*Downs syndrome*  
*ADHD*

*Autism Spectrum Disorders*

Information on social behaviours can help us develop more targeted intervention approaches to support both the child and the wider family unit in terms of healthy social interaction and potential social vulnerability.

### Further Information

This research is being conducted by academic researchers at Durham and Cardiff Universities who are part of the Centre for Developmental Disorders. If you would like further information, or have questions you would like to ask before deciding about participation, please use the details below.

If you would like to participate please use the online link above to access full information and the online questionnaire.
